## NETWORK SECURITY

# Staying ahead of evolving global cyber-threats to your website.

Because DNS is the entry point to your website, it is essential to consider DNS in your overall security plans. CloudFloor DNS believes that security must go hand-in-hand with the requirement for peak performance and highly reliable web infrastructure.

We have designed and implemented multiple security redundancy layers on top of a hardened, distributed infrastructure for best mitigation of Internet and physical security threats.

Some of our key security features include:

- Adherence to best security practices and continuous improvement plans,
- All staff are security vetted with background checking,
- All servers are firewall protected,
- All servers are constantly monitored in real-time, including logins,
- All server communication, both management and inter-node are heavily encrypted,
- All servers are dedicated and run minimal sets of software for their tasks, reducing their vulnerability footprint,
- CloudFloor DNS does not utilize BIND. Instead we use a proprietary solution with no known vulnerabilities,
- All servers are housed in secure facilities with strict access protocols, and
- Where possible CloudFloor DNS uses hardened routers with features such as Cisco-guard

CloudFloor DNS is committed to continually evolving its security measures to stay ahead of global cyber threats.

## About CloudFloor DNS

At CloudFloor, DNS is our passion and reliability and performance is our obsession. Our goal is to provide the most reliable and highest performing Internet infrastructure available through our core DNS services.

Your customer's web experience begins with DNS resolution and our Enterprise DNS service is backed by a 100% Reliability Guarantee and the industry's first 100% Performance Guarantee.

CloudFloor DNS has been in the Internet infrastructure business since 1999. To date, we have provided services to over 10,000 customers, including governments, major financial institutions, as well as hundreds of small and medium-size business worldwide.

CloudFloor DNS is a wholly owned subsidiary of CloudFloor Corporation with headquarters in Waltham, Massachusetts. Several leading venture firms from North America and Europe, including London-based Doughty Hanson LLP have backed CloudFloor.

## The Logical Choice For Your Business

To learn more about how CloudFloor DNS can improve the reliability, performance and security of your DNS, call us in the US on +1 781-373-5158 or in Europe and the UK on +44 (0)1481 720924.
